FAYYAZ TRAVELS

Admin Panel

User Guide

How the panel works, what it includes, and how staff use it

2 November 2026

Who this guide is for

Product, sales, marketing, operations, and admin staff. It explains day-to-day use of the panel. Button and menu names match the screen.

1. What this panel is

ftadmin is the internal staff panel for Fayyaz Travels. It is not the public website. Customers do not log in here. Staff use it to manage website content and travel products: packages, blogs, pages, suppliers, enquiries, promotions, and staff accounts.

Open the panel in either of these places:

- Live office use: https://fayyaz.travel/panel/
- On your own computer for testing: http://localhost:3000/panel/ (only while the system is running locally)

The login screen appears as soon as you open the address. Nothing inside the panel opens without a valid email and password.

2. How the panel works

You fill in a form in the browser, the panel saves it, and approved content is what the public website can show. Not every staff member sees the full panel. Your role decides which menus appear, and whether you can only view a module, edit it, or also delete records.

A typical piece of work moves through these stages:

1. You sign in. The panel recognises your name and role.
2. The left menu shows only the items you are allowed to view.
3. You open a list (such as All Packages or All Posts) or create a new record.
4. You fill in the form and click Save. Unfinished work stays as a Draft. It is not live on the website yet.
5. When the content is ready, it is sent for review, then published.
6. A published package, blog, or page is the version that belongs on the website. Enquiries travel the other way: from the website into the panel inbox.

Three parts of the screen stay the same on every page:

Part	Where	What it does
Sidebar	Left	All modules: Dashboard, Settings, Blogs, Pages, Packages, Suppliers, Promotions, Enquiry

Header	Top	Package search, the enquiry bell, your name, and Logout
Main area	Centre	The page you opened: a list, a form, or the dashboard

The search box at the top matches package names as you type. Press Enter to open the All Packages list with that search. The bell shows open enquiries from the website. Sign out with Logout when you finish, especially on a shared computer.

3. How to sign in

1. Open the panel address in the browser.
2. Enter your staff email and password.
3. Click Sign in. The Dashboard opens.
4. A wrong password shows an error. Try again, or ask a Super Admin to reset it.

New staff accounts should be created by a Super Admin in Settings, under User Management. That person sets the role and gives you the email and password. Do not share the password after the first login.

Session

After login, the panel keeps you signed in for about 7 days, until you click Logout or the saved login is cleared in the browser. Always log out on a shared PC.

4. What you will see — roles and permissions

Every user has a role. The role decides which menu items appear, and whether that module allows View, Edit, or Delete. The sidebar hides a module when you do not have View on it.

Role	What that person can usually do
Super Admin	The full panel. Add, edit, and deactivate staff, manage roles and permissions, and delete records.
Admin	Day-to-day content: packages, blogs, pages, suppliers, and enquiries. Delete and user control depend on the Super Admin.
Custom role	For example Product, Sales, or Marketing. A Super Admin sets View, Edit, and Delete separately in Access Control.

If a menu is missing, or Save does nothing, it may be a permission. Ask a Super Admin to turn on Edit for that module.

Permission has three levels:

- View — open the page and read the data. No changes.
- Edit — create a record, update it, and save.
- Delete — remove or archive a record. This is often limited to Super Admin.

Each step of the package wizard can have its own permission. One person may edit only Pricing, and another only SEO. A step outside your role stays closed.

5. Features at a glance

Feature	Who uses it	What it is for
Dashboard	All staff	Counts, recent activity, and shortcuts into the main jobs
Packages	Product team	Build a tour, send it for review, publish it, and watch rate expiry
Suppliers	Product / Ops	Directory of hotels, transport, DMCs, and other vendors
Blogs	Marketing / SEO	Write, schedule, and publish website articles
Pages	Marketing	Fixed website pages such as About and Contact
Promotions	Sales / Marketing	Build a package discount (session-only for now — see below)
Enquiry	Sales	Contact and newsletter messages from the website
Settings	Super Admin	Company details, users, roles, and access

6. Dashboard

The Dashboard is the first page after login. It shows how much content is in the system and gives a direct way into the next job.

The cards along the top show these counts. Click a card to open the related list:

- Total Pages — website pages
- Total Destinations
- Total Packages
- Total Testimonials
- Total Blogs
- Total Products
- Newsletter Subscribers

The chart shows visitors and page views for the last 7, 30, or 90 days. Recent Activity shows who published or updated something. Quick Actions open Add New Package, Write New Blog, Manage Packages, View All Blogs, User Management, and Package Categories.

7. Packages — the main job in the panel

A package is a full tour product: destination, photos, price, day-by-day itinerary, hotels, inclusions, booking rules, sales notes, FAQs, ad material, and SEO. It is not one single form. It is a 14-step wizard. If you stop in the middle, the package stays saved as a Draft. You can continue later from the same record.

7.1 How to create a package

1. In the left menu, open Packages, then Add Package.
2. If a similar tour already exists, use Use Template to apply a skeleton. Many fields fill in for you. Edit them for this tour.

3. Start at step 1. Each step has Save at the bottom. Save before you leave the step.
4. The stepper at the top shows which step you are on. You can return to any completed step.
5. When the required sections are filled, go to step 14, Review & Publish.
6. That step shows a readiness percent. Incomplete sections stay as draft. Publish only when the key sections and the sign-off names are filled.
7. Click Submit for review when someone else must approve it. Click Publish when you are allowed to make it live.

What Draft means

Save does not mean the package is live on the website. A draft stays in the staff panel. Customers see it only after the status is Published.

7.2 The 14 wizard steps

Each step belongs to a department. In a small team one person can fill several steps. In a larger team, product, finance, sales, marketing, and SEO take different steps.

Step	Name	Who fills it	What you enter
1	Supplier Source	Product	Which supplier this package comes from, and the source details
2	Package Basics	Product	Title, destination, duration, category, type, theme, and slug
3	Media & Front-End	Product + Marketing	Cover photo, gallery, and what the customer sees on the website
4	Pricing	Product + Finance	Rates, season, currency, and markup. Pricing Rules apply here
5	Itinerary	Product	The day-by-day plan
6	Hotels	Product + Ops	Hotels by night, city, and category
7	Inclusions	Product	What is included and what is not
8	Booking Policy	Ops + Finance	Deposit, cancellation, and payment rules
9	Consultant View	Sales lead	Notes for the sales consultant only, not for the customer
10	Supplier Quote Tool	Consultants	The quote request sent to the supplier
11	Front-End FAQs	Product + SEO	Questions and answers shown on the website
12	Sales & Ads Assets	Marketing + Sales	Text for WhatsApp, ads, and sales creatives
13	SEO	SEO team	Page title, meta description, and search wording
14	Review & Publish	Final approver	Check, sign off, Submit for review, or Publish

7.3 Photos, slug, and SEO

- Use photos at least 1200px wide. A 16:9 ratio is preferred. Do not add a watermark or text on the image.
- The slug is the part of the website link. Keep it short, use hyphens, and include the destination. Example: japan-golden-route-9-days
- Write the SEO title and description the way a customer would search on Google. Do not use internal codes or only the supplier name.

7.4 Package lists you will open

Under Packages, then Package Dashboard, these lists are the daily working set:

Menu	When to open it
All Packages	Find any package, then edit, duplicate, or archive it
Draft Packages	Tours still moving through the 14 steps. Open one and continue
Pending Reviews	Packages already sent with Submit for review, waiting for an approver
Expiring Rates	Supplier rates whose validity ends within 30 days. Update these quickly so an old price does not stay on the website
Supplier Quote Requests	Packages that have Supplier Quote Tool data saved. A quote email can be sent from here

Common actions inside a list:

- Open / Edit — the wizard opens at the step where the work stopped.
- Duplicate — makes a similar new package so you do not start from a blank form.
- Archive — takes the package out of active sales but keeps the record for reference.
- Search — the header search box, or the filter on the list.

7.5 Emailing a supplier quote

When step 10 of a package has supplier quote details saved, Supplier Quote Requests can send that request by email. CC and BCC are added automatically. Those addresses come from Settings, then General, in the supplier quote CC and BCC fields. If mail is not set up, the email is not sent and an error appears. Tell IT or a Super Admin.

7.6 Package settings

These lists are not packages. They are the choices that become dropdowns in Package Basics and Pricing. Create the item here first, then select it on the package.

Setting	Example	Why it exists
Package Categories	Domestic, International, Honeymoon	Which group the package appears in on the website
Package Type	Leisure, Safari, Cruise	What kind of tour it is

Package Themes	Family, Romantic, Adventure	A merchandising tag, separate from the category
Pricing Rules	18% markup, ZAR to SGD	The finance rule that turns a net rate into a selling price. One rule is the default
Package Templates	Group tour skeleton	A ready form for a new package. Apply it with Use Template on Add Package

A category, type, theme, or pricing rule cannot use a name that already exists. Do not delete an item that a live package still uses. Delete is usually limited to Super Admin.

8. Suppliers

Suppliers is the company vendor directory: DMCs, hotels, transport, and other partners. The Supplier Source step on a package uses this list, so add a new vendor here first.

Typical fields when you add or edit a supplier:

- Company or contact name, country, and the kind of relationship
- Which service they provide
- Email and phone, so a quote can be sent
- Status: active or inactive. Do not use an inactive supplier on a new package

The list has search, a country filter, and a details popup. The list can be downloaded as Excel or CSV when the operations team needs a sheet.

9. Blogs

Blogs are the website articles: travel tips, destination stories, and news. The menu name is Blogs Management.

Menu	Meaning
All Posts	Every post, in every status
Write New Blog	A new article: title, category, body, image, related packages, and SEO
Drafts	Posts still being written
Pending Review	Posts waiting for approval
Scheduled	Posts with a future publish time. The system publishes them at that time (Singapore time)
Published	Posts that are live on the website
Blog Categories	Groups such as Travel Tips, Destinations, and News. Create the category before you write the post

Order for writing a blog:

1. Check Blog Categories. Create the category first if it is missing.

2. Open Write New Blog.
3. Enter the title, slug, category, cover image, and article. You can attach related packages so the reader can open the tour.
4. Save as a draft if it should not appear on the website yet.
5. Send it to Pending Review when someone else must approve it.
6. Set a future publish time to go live later. The post stays in Scheduled, then becomes Published when that time arrives.

10. Pages

Page Management is for fixed website pages, such as About Us and Contact Us. These change less often than blogs, but the text, SEO, and status are controlled here.

- All Pages — every page
- Create Page — a new page: title, slug, content, and page type
- Drafts — not live yet
- Published — pages currently on the website

Changing a slug changes the website link. Change the slug of a page that is already live only when marketing is ready to use the new link.

11. Promotions

The Promotions screen can hold an offer: a name, booking dates (when the customer must book), travel dates (which trip dates the offer covers), a discount as Percentage or Fixed Amount, the packages it applies to, and Active or Inactive.

How to create an offer:

1. Open Promotions in the sidebar.
2. Create a promotion. Use a title the sales team will recognise, such as Early Bird Japan 10%.
3. Fill Booking from–to and Travel from–to. They are different. The booking date is when the customer books. The travel date is when the trip starts.
4. Choose the discount type. For Percentage, 10 means 10 percent. Fixed Amount is a flat figure.
5. Select the packages the offer applies to. The list comes from real packages.
6. Leave it Active and save.

Current limit — read this

Promotions currently live only in that browser session. They are not saved in the database and do not become a live discount on the website. A refresh, or another computer, will not show the same offer. Use this screen as an internal sales note until the feature saves permanently. Do not promise a customer a discount based only on this screen.

12. Enquiry

Enquiry is the inbox for messages from the public website. There are two kinds: Contact Us, and Popup / Newsletter. Sales works the leads from here.

How to use it:

1. Open Enquiry in the sidebar, or use the bell in the header for open messages.
2. Filter by All, Open, or Closed. Filter by type to separate Contact Us from Newsletter.
3. Open the message and read the name, email, phone, destination or origin, and the text.
4. After you follow up, set the status to Closed so the open list only shows new work.
5. Delete a wrong or spam entry only if your role includes delete.

Open means action is still pending. Closed means staff have handled it. Deleting an enquiry removes that customer message, so confirm before you delete.

13. Settings

Settings appears only for roles that include that module. Content writers do not need it for daily writing. There are four pages.

13.1 General

Company details live in one place:

- Site Name, Company Name, Support Email, and Support Phone
- Timezone (the office uses Singapore time) and Office Address
- Homepage Title and Homepage Description
- Maintenance Mode — turning this on signals a frontend maintenance window. Do not switch it on without a reason.
- Supplier quote CC — these addresses are copied on every quote email. Separate them with commas or new lines.
- Supplier quote BCC — the same email, hidden, for audit. The supplier does not see BCC.

After you save, Last updated appears at the bottom. A wrong email here sends quote copies to the wrong people.

13.2 User Management

This is the list of staff accounts. A Super Admin creates new users.

1. Open Settings, then User Management.
2. On Add User, enter the name, email, password, and role.
3. Send that person the email and password. They sign in with those.
4. When someone leaves, set the account to Inactive. An inactive user cannot sign in. Delete removes the record.

- You cannot deactivate or delete your own account.
- The last active Super Admin cannot be removed or demoted. Create another Super Admin first.

13.3 Role Management

This is where roles are created and changed, and where one employee can be given more or less access than the role default. For example, every Marketing user can edit blogs, while one junior can only view them.

Do not rename built-in roles such as Admin and Super Admin. Create a new role for a new job, such as Product Executive or Sales Consultant. If you delete a role, its users move to Admin.

13.4 Access Control

This is the permission matrix. Each role has rows for the modules: Dashboard, Blogs, Pages, Packages, Suppliers, Enquiries, Settings, Users, and every step of the package wizard. Each module has three switches: View, Edit, and Delete.

After the matrix changes, that user should sign in again, or refresh the page, before the new menu appears. To change one person only, use the employee override in Role Management. Do not change the whole role for one exception.

14. What each team does

Team	When you open the panel	During the week
Product	Check Draft Packages and Expiring Rates. Update any rate that is about to expire in the Pricing step.	Build new packages through the 14 steps. If a category, type, or theme is missing, add it in settings first.
Sales	Check the open Enquiry list and the header bell. Reply to the new lead, then set it to Closed.	Update Consultant View and quote requests. Ask suppliers for rates.
Marketing	Check blog drafts and scheduled posts. Confirm that anything due today is in Published.	Write blogs, edit pages, and fill Sales & Ads Assets and SEO.
SEO	Review package step 13 and the title and description on blogs and pages.	Keep the slug and meta text tied to the destination keyword.
Finance / Ops	Check that Pricing Rules and Booking Policy are still correct.	Add a new currency or markup rule only after management approves it.
Super Admin	Create the account and role for new staff.	Review Access Control. Set departed staff to Inactive. Confirm the quote CC emails are still correct.

15. Four common jobs, step by step

15.1 Close a customer enquiry

1. Use the bell in the header, or open the Enquiry menu.
2. Filter to Open.
3. Read the message and reply by your own email or phone. The panel does not send an automatic reply to the customer.
4. Back in the panel, set the status to Closed.

15.2 Continue an unfinished package

1. Open Packages, then Draft Packages.
2. Search for the package name and click Edit.
3. Go to the step that is still thin. Keep clicking Save.

4. On step 14, read the readiness. When it is ready, click Submit for review.

15.3 Publish a blog next Monday, not today

1. Open Write New Blog, or open the post from Drafts.
2. Finish the article and add the image.
3. Set the publish time in the future (Singapore time).
4. Save. The post appears under Scheduled. The system publishes it at that time. Your computer does not need to stay on. The server does.

15.4 Give a new consultant only enquiries and packages

1. As Super Admin, create a role in Role Management, such as Sales Consultant. Do not rename Admin or Super Admin.
2. In Access Control, give that role View on Enquiry and Packages, and Edit if they must change records. Leave Settings, Users, and Delete off.
3. In User Management, create the account and choose this role.
4. Ask the consultant to sign in once and check the sidebar. Menus they should not have must stay hidden.

16. Things to remember

- Save and Publish are different. Save keeps a draft. Treat content as customer-facing only after Publish.
- Open Expiring Rates at least once a week. Rates that end within 30 days appear there.
- Do not put a watermark on photos. Images under 1200px look soft on the website.
- In a slug, use short lowercase words with hyphens, not spaces or capitals.
- Promotions are not saved permanently yet. Do not promise a customer a discount from that screen alone.
- Quote email CC and BCC come from Settings, then General. Do not put a personal mailbox there.
- Turn Maintenance Mode on only when the website is being paused on purpose.
- Do not share passwords. When someone leaves, set the account to Inactive.
- If a menu is missing, ask about permission first. A refresh is often enough after a role has just been changed.
- When you finish, click Logout.

17. If something looks wrong

What you see	Try this first
Cannot sign in	Check the email spelling, the password, and that the account is Active. Ask a Super Admin.
A menu is missing	View is off for that module on your role. Check Access Control.
The form opens but will not save	You may not have Edit, or a required field is empty. Read the error message.
Publish is blocked or readiness is	On step 14, open the incomplete section and finish that step.

low	
The quote email did not send	Check the supplier email and the CC addresses in Settings. IT sets up mail.
A promotion disappears after refresh	That is expected for now. Promotions are not stored in the database.
An old price is still on the website	Update Expiring Rates and the Pricing step, then save and publish again.
The wrong person can see every menu	Check that their role is not Super Admin. Change the role, then ask them to sign in again.

This guide is so a new staff member can open the panel and use the right menu, the right status, and the right publish step from the first day. If a button on screen is not in this list, confirm it with a Super Admin. Permission can hide or show that button.
