FAYYAZ TRAVELS

# ftadmin

## Software Documentation

Admin panel for packages, content, suppliers, enquiries, and staff access

Version 1.0 · 2 November 2026

| Item | Detail |
|---|---|
| Software name | ftadmin (Fayyaz Travels Admin Panel) |
| Product | Internal staff software for Fayyaz Travels |
| Live address | https://fayyaz.travel/panel/ |
| Audience | Product, sales, marketing, operations, and administrators |
| Document type | Software description, features, and operating guide |
| Related file | FT-Admin-Panel-User-Guide is the shorter day-to-day guide |

## 1. Purpose

This document describes the ftadmin software: what it is, who uses it, how the parts fit together, what each feature does, and how staff operate it. It is the software reference for the business. Screen names match the panel.

The software does four kinds of work:

- Build and publish travel packages that the public catalogue can show.
- Write and publish website blogs and fixed pages.
- Keep a supplier directory and handle website enquiries.
- Control which staff member can see, edit, or delete each area.

## 2. What the software is

ftadmin is the staff administration panel for Fayyaz Travels. It is not the public website and it is not a customer booking account. Customers never sign in here. Staff sign in, maintain products and content, and read messages that visitors send from the website.

A saved draft stays inside the panel. Content becomes the version intended for the website only after it is published. Enquiries move in the other direction: a visitor submits a form on the website, and the message appears in the Enquiry inbox.

**Addresses**

Live panel: https://fayyaz.travel/panel/ . Local testing, while the system is running on the computer: http://localhost:3000/panel/ .

### 2.1 What is inside the software

| Module | What the software stores and does |
|---|---|
| Dashboard | Counts for pages, destinations, packages, testimonials, blogs, products, and newsletter subscribers. A 7, 30, or 90 day chart, recent activity, and shortcuts. |
| Packages | A 14-step package builder, lists by status, rate expiry, supplier quote requests, categories, types, themes, pricing rules, and templates. |
| Suppliers | Vendor directory used when a package names its source. Search, country filter, details, and Excel or CSV download. |
| Blogs | Articles with draft, review, schedule, and publish. Categories, related packages, and automatic publish at the scheduled Singapore time. |
| Pages | Fixed website pages such as About Us and Contact Us, with draft and published states. |
| Promotions | A screen to describe a discount offer against selected packages. See the limitation in section 8. |
| Enquiry | Inbox of Contact Us and Popup / Newsletter messages from the website. Open or closed. |
| Settings | Company details, quote-email copies, staff accounts, roles, and the permission matrix. |

### 2.2 What this software does not replace

- The public Fayyaz Travels website. The panel manages content for it. Visitors still browse the public site.
- Customer accounts, online payment, and the booking engine. Those are not screens in this panel.
- Legacy website post tables. Blogs and pages created here are the panel's own content records.
- A permanent promotions engine. The Promotions screen does not yet write offers into the database or onto the website.

## 3. Who uses it

Every person has one staff account and one role. The role decides the sidebar and whether each module allows view, edit, or delete. A person with no view right does not see that menu.

| Role | Intended use |
|---|---|
| Super Admin | Full panel. Creates staff, roles, and permissions. Can deactivate accounts and perform deletes that other roles cannot. |
| Admin | Day-to-day content: packages, blogs, pages, suppliers, and enquiries. User control and delete stay with the Super Admin unless the matrix says otherwise. |
| Custom role | A named job such as Product Executive or Sales Consultant. View, Edit, and Delete are set per module, including each package-builder step. |

A practical split of work:

- Product builds packages, watches expiring rates, and maintains categories, types, and themes.
- Sales reads enquiries, consultant notes, and supplier quote requests.
- Marketing writes blogs, pages, sales assets, and SEO fields.
- Finance and operations maintain pricing rules and booking policy.
- A Super Admin owns accounts, roles, and company settings.

# 4. How the software works

The person works in a browser. The panel page talks to an application service, and that service reads and writes the Fayyaz Travels database. Uploaded images and videos are stored as files and shown back in the panel. Dates and scheduled blog times use Singapore time.

A normal record follows this path:

1. The staff member signs in. The software keeps the session for about seven days, or until Logout.
2. The sidebar is filtered to modules that role can view.
3. The person opens a list or starts a new record.
4. Save stores the work. A package or blog can remain a draft.
5. Submit for review marks it as waiting for an approver.
6. Publish is the step that makes the record the live version. A scheduled blog publishes itself when its Singapore time arrives, as long as the server is running.

The screen has three fixed areas:

| Area | Place | Behaviour |
|---|---|---|
| Sidebar | Left | Dashboard, Settings, Blogs Management, Page Management, Packages, Suppliers, Promotions, Enquiry |
| Header | Top | Package search, enquiry bell, signed-in name, Logout |
| Main area | Centre | The list, form, or dashboard for the page that was opened |

The header search matches package names and can open All Packages with that search. The bell lists open enquiries. Logout ends the session on that browser.

## 4.1 Sign-in

1. Open the panel address.
2. Enter the staff email and password.
3. Choose Sign in. The Dashboard opens.
4. If sign-in fails, check the email, the password, and that the account is active. A Super Admin resets or reactivates the account.

New accounts are created in User Management by a Super Admin. The first account on a fresh installation becomes Super Admin. After that, do not rely on public sign-up for staff. Hand out the email and password once, and do not share them further.

# 5. Dashboard

The Dashboard is the home page. Cards show Total Pages, Total Destinations, Total Packages, Total Testimonials, Total Blogs, Total Products, and Newsletter Subscribers. Each card opens the related list. The chart switches between 7, 30, and 90 days. Recent Activity lists recent publishes and updates. Quick Actions jump to Add New Package, Write New Blog, Manage Packages, View All Blogs, User Management, and Package Categories.

# 6. Packages

Packages are the main product records. One package holds the supplier source, title and classification, media, price, itinerary, hotels, inclusions, booking policy, consultant notes, quote request, FAQs, sales assets, SEO, and the publish decision. The builder has 14 steps. Leaving midway keeps a draft. Edit later from Draft Packages.

When a package is published, the software keeps the full builder record and also places a catalogue entry the public site can list. Archive removes a package from active sales and keeps it for reference. Delete is a separate action and is limited by role.

## 6.1 Create and publish a package

1. Open Packages, then Add Package.
2. If a similar tour exists, use Use Template. The skeleton fills fields. Edit them for this tour.
3. Complete the steps from the top stepper. Use Save on each step before moving on.
4. On step 14, Review & Publish, read the readiness percent. Incomplete sections stay in draft, and publish stays blocked until the required sections and sign-off names are complete.
5. Choose Submit for review when an approver must accept it, or Publish when this account is allowed to make it live.
6. Use Preview package on that step to check the result before publishing.

**Save is not publish**

Save stores a draft inside the panel. Customers are not meant to see that package until its status is Published.

## 6.2 The 14 steps

| Step | Name | Department | Content |
|---|---|---|---|
| 1 | Supplier Source | Product | Which supplier the package comes from |
| 2 | Package Basics | Product | Title, destination, duration, category, type, theme, slug |
| 3 | Media & Front-End | Product + Marketing | Cover image, gallery, and front-end presentation |
| 4 | Pricing | Product + Finance | Rates, seasons, currency, and markup, using Pricing Rules |
| 5 | Itinerary | Product | Day-by-day plan |
| 6 | Hotels | Product + Ops | Hotels by night, city, and category |

| | | | |
|---|---|---|---|
| 7 | Inclusions | Product | Included items and exclusions |
| 8 | Booking Policy | Ops + Finance | Deposit, cancellation, and payment rules |
| 9 | Consultant View | Sales lead | Internal notes for consultants, not for the customer |
| 10 | Supplier Quote Tool | Consultants | Quote request that can be emailed to the supplier |
| 11 | Front-End FAQs | Product + SEO | Questions and answers for the website |
| 12 | Sales & Ads Assets | Marketing + Sales | Text for WhatsApp, ads, and sales material |
| 13 | SEO | SEO | Title, meta description, and search wording |
| 14 | Review & Publish | Final approver | Readiness, sign-off, review, or publish |

Content rules used by the builder guides:

- Photos should be at least 1200 pixels wide, preferably 16:9, with no watermark and no text baked into the image.
- The slug is the link name. Keep it short, lowercase, and hyphenated, and include the destination. Example: japan-golden-route-9-days.
- SEO title and description should use the words a customer would search for.

## 6.3 Package lists

| Screen | Use |
|---|---|
| Package Dashboard | Pipeline counts and the way into the package lists |
| All Packages | Search every package. Edit, duplicate, or archive from the row |
| Draft Packages | Packages still inside the 14 steps |
| Pending Reviews | Packages submitted and waiting for approval |
| Expiring Rates | Rates whose validity ends within the next 30 days |
| Supplier Quote Requests | Packages with quote-tool data. Send the supplier email from here |

Duplicate copies a package so a similar tour does not start blank. Archive keeps the record and takes it out of active sales. Edit reopens the wizard at the saved step. Header search and the list filters find a package by name.

Supplier quote email uses the address on the quote step. Every outgoing quote also copies the CC list and blind-copies the BCC list from Settings, General. If mail is not configured, the send fails and the screen reports the error. IT or a Super Admin has to enable mail.

## 6.4 Package reference data

These records are not tours. They are the choices that appear while a package is being built. Create the choice here before selecting it on a package. Names must be unique. Do not delete a choice that a live package still uses.

| Reference data | Example | Used for |
|---|---|---|
| Package Categories | Domestic, International, Honeymoon | How the tour is grouped on the site |
| Package Type | Leisure, Safari, Cruise | The kind of tour |
| Package Themes | Family, Romantic, Adventure | Merchandising tags, separate from categories |
| Pricing Rules | 18% markup, ZAR to SGD | Turning a net rate into a selling price. One rule is the default |
| Package Templates | Group-tour skeleton | A reusable starting point, applied with Use Template |

### 6.5 Package statuses

| Status | Meaning |
|---|---|
| Draft | Being written. Not the live website version. |
| Pending Review | Submitted. Waiting for an approver. |
| Published | Approved to be the live catalogue version. |
| Archived | Removed from active sales and kept for reference. |
| Deleted | Removed from normal lists. Treat delete as permanent from the staff point of view. |

## 7. Suppliers

Suppliers is the vendor directory: DMCs, hotels, transport, and other partners. Add the vendor here before selecting it as a package source. A supplier record holds the company or contact name, country, relationship, services offered, email, phone, and active or inactive status. Inactive suppliers should not be used on new packages.

The list supports search and a country filter. Open a row for the detail view. Download the current list as Excel or CSV when operations needs a spreadsheet.

## 8. Blogs

Blogs Management holds website articles: travel tips, destination stories, and news. A post has a title, slug, category, body, cover image, related packages, and SEO fields.

| Screen | Meaning |
|---|---|
| All Posts | Every post, every status |
| Write New Blog | Create an article |
| Drafts | Still being written |

| | |
|---|---|
| Pending Review | Waiting for approval |
| Scheduled | Will publish itself at the chosen Singapore time |
| Published | Live article |
| Blog Categories | Groups such as Travel Tips, Destinations, and News. Create the category before the post |

Blog statuses are Draft, Pending Review, Scheduled, Published, and Archived.

To publish later, finish the article, set a future time in Singapore time, and save. The post stays under Scheduled. A job on the server publishes due posts. The writer's computer does not need to stay switched on.

## 9. Pages

Page Management holds fixed website pages, such as About Us and Contact Us. Screens are All Pages, Create Page, Drafts, and Published. A page has a title, slug, content, page type, and status. Statuses are Draft, Published, and Archived.

Changing a slug changes the public link. Change the slug of a page that is already published only when the new link is ready to be shared.

## 10. Promotions

The Promotions screen describes an offer: title, booking dates, travel dates, a percentage or a fixed amount, the packages it applies to, and active or inactive. Booking dates are when the customer must book. Travel dates are the trip dates the offer covers. The package list is loaded from real packages.

**Current software limit**

Promotions are kept only in the browser session. There is no saved promotions table and no website discount is created. Refreshing the page or opening another computer drops the offer. Use the screen as an internal note until this feature is stored permanently. Do not confirm a customer discount from this screen alone.

## 11. Enquiry

Enquiry is the inbox for website messages. Types are Contact Us and Popup / Newsletter. Each message can be open or closed. Open means nobody has finished the follow-up. Closed means staff have handled it. The header bell shows open messages.

Staff reply outside the panel, by phone or email. The software does not send an automatic customer reply. After the follow-up, set the message to Closed. Delete removes the message, so confirm first. Filters cover all, open, closed, and message type.

## 12. Settings

Settings is for administrators. It has four screens. People who only write content do not need it.

### 12.1 General

- Site Name, Company Name, Support Email, Support Phone, Timezone, and Office Address.
- Homepage Title and Homepage Description.
- Maintenance Mode. Turn this on only when the public site is being paused on purpose.
- Supplier quote CC. These addresses are copied on every supplier quote email. Separate them with commas or new lines.
- Supplier quote BCC. These addresses receive a hidden copy for audit. The supplier does not see them.

After a save, the screen shows when the settings were last updated.

### 12.2 User Management

A Super Admin creates staff here.

1. Open Settings, then User Management.
2. Add User with name, email, password, and role.
3. Give that person the email and password so they can sign in.
4. When someone leaves, set the account to Inactive. An inactive account cannot sign in. Delete removes the record.

- A person cannot deactivate or delete their own account.
- The last active Super Admin cannot be removed or demoted. Create another Super Admin first.

### 12.3 Role Management

Create and rename custom roles here, and give one employee a different permission set from the role default. Do not rename the built-in Admin or Super Admin roles. If a custom role is deleted, its users are moved to Admin.

### 12.4 Access Control

Access Control is the matrix of View, Edit, and Delete. Rows cover Dashboard, Blogs, Blog Categories, Pages, Packages, package reference data, Suppliers, Pricing Rules, Templates, Media, Enquiries, Settings, User Management, Roles, and each of the 14 package steps. After a change, the affected person should refresh or sign in again before the sidebar updates. Change one person with an employee override. Do not rewrite the whole role for a single exception.

## 13. Permissions

| Right | Allows |
|---|---|
| View | Open the screen and read records. No changes. |
| Edit | Create and update records, including Save. |
| Delete | Remove or archive, where that action exists. Often kept for Super Admin. |

Package steps can be split. One role may edit Pricing and not SEO. A step the role cannot view stays unavailable in the builder. If a menu is missing, check View on that module before treating it as a fault.

# 14. Standard operating tasks

## 14.1 Close an enquiry

1. Open the bell or the Enquiry menu and filter to Open.
2. Read the message.
3. Reply by phone or email. The panel does not reply for you.
4. Set the status to Closed.

## 14.2 Continue a package

1. Open Packages, then Draft Packages.
2. Search for the name and choose Edit.
3. Finish the thin steps and Save on each one.
4. On Review & Publish, submit for review or publish when readiness allows it.

## 14.3 Schedule a blog

1. Open Write New Blog, or open a draft.
2. Complete the article and image.
3. Set a future publish time in Singapore time.
4. Save. Confirm the post is listed under Scheduled.

## 14.4 Limit a new consultant

1. In Role Management, create a role such as Sales Consultant. Do not rename Admin or Super Admin.
2. In Access Control, allow View on Enquiry and Packages, and Edit only if they must change records. Leave Settings, Users, and Delete off.
3. In User Management, create the account on that role.
4. Ask the person to sign in and confirm the sidebar.

# 15. Technical summary

This section is the short technical description of the running software. Day-to-day staff can skip it. It is here so the document describes the software as built.

| Part | What it is |
|---|---|
| Staff interface | Browser application. Next.js and React. The site path is /panel/. |
| Application service | Separate API process. The browser calls /api. The web server forwards those calls to the API. |
| Database | MySQL or MariaDB, database name fz. Staff records and the existing website tables live together. |
| Files | Uploaded images and videos are stored under uploads and served from /uploads/. |
| Sign-in | Email and password. The password is stored as a hash. The browser keeps a signed token |

| | |
|---|---|
| | for about seven days. |
| Mail | Supplier quote email uses Microsoft Graph when it is configured, otherwise SMTP. |
| Clock | Scheduled blogs and the times shown in the panel use Singapore time. |
| Background job | Once a minute, the server publishes blog posts whose scheduled time has arrived. |

Live traffic is served as follows:

| Public path | Goes to |
|---|---|
| /panel/ | The staff interface |
| /_next/ | Interface assets |
| /api/ | The application service |
| /uploads/ | Uploaded media |
| / | The public Fayyaz Travels website, which this panel does not replace |

Package data written in the builder is stored as the full admin package. Publishing also keeps a catalogue stub in the website package table so the public site can list it. Enquiries are read from the website message table. Blogs, pages, suppliers, settings, roles, and staff accounts are admin-owned records.

## 16. Rules and limits

- Save and Publish are different actions. Only Published is the live version.
- Check Expiring Rates at least weekly. That list is the 30-day rate warning.
- Promotions are not stored and do not change website prices.
- Quote CC and BCC come only from General settings. Do not put a personal mailbox there.
- Maintenance Mode is a real signal to the front end. Leave it off unless the site is being paused.
- Do not share passwords. Deactivate an account when a person leaves.
- Menu visibility follows the role. Refresh after a permission change.
- Uploads should stay within the size the form accepts. Images are jpeg, png, gif, webp, or svg. Video is mp4, webm, ogg, or QuickTime.
- The activity list inside Role Management is a screen aid. It is not the system audit history.

## 17. When something fails

| What you see | What to do |
|---|---|
| Cannot sign in | Check email, password, and that the account is active. Ask a Super Admin. |
| A menu is missing | View is off for that module. Check Access Control, then refresh or sign in again. |
| Save does nothing or shows an error | Edit may be off, or a required field is empty. Read the message on screen. |

| | |
|---|---|
| Publish stays blocked | Step 14 lists the incomplete sections. Finish those steps and the sign-off names. |
| Quote email did not send | Check the supplier address and the CC list. If mail is not configured, IT must enable it. |
| A promotion vanished after refresh | Expected. Promotions are not stored in the database. |
| An old price is still public | Update the rate in Pricing, then save and publish again. Also check Expiring Rates. |
| Someone can see every menu | Their role may be Super Admin. Change the role and ask them to sign in again. |

## 18. Glossary

| Term | Meaning |
|---|---|
| Draft | Saved work that is not published. |
| Publish | Mark the record as the live version. |
| Slug | The readable end of a web address, such as japan-golden-route-9-days. |
| Archive | Keep the record but remove it from active sales or the live list. |
| Pricing rule | Markup and currency conversion used when a package price is calculated. |
| Template | A reusable package skeleton applied from Add Package. |
| Enquiry | A message sent from the public website. |
| Super Admin | The account that manages staff, roles, and full access. |
| Singapore time | The clock the panel uses for display and for scheduled blogs. |

This document describes the ftadmin software as it operates for Fayyaz Travels staff. Where a button is hidden, the role is the first place to look. Where a promotion or an unpublished draft is concerned, do not treat it as live on the public website.

Fayyaz Travels · ftadmin software documentation · Version 1.0 · 2 November 2026
